

KORTE.
MEDICAL

Clean, disinfected hands are one of the main requirements in the daily life of medical professionals. Medical professionals wash and disinfect their hands several times a day. Hand hygiene is a mandatory and integral part of the daily routine of medical workers, regardless of the presence of pathogens.

Our company offers several models of scrub sinks made from Solid Surface in order to provide medical industry professionals with convenient and effective solutions for hand washing and disinfection.

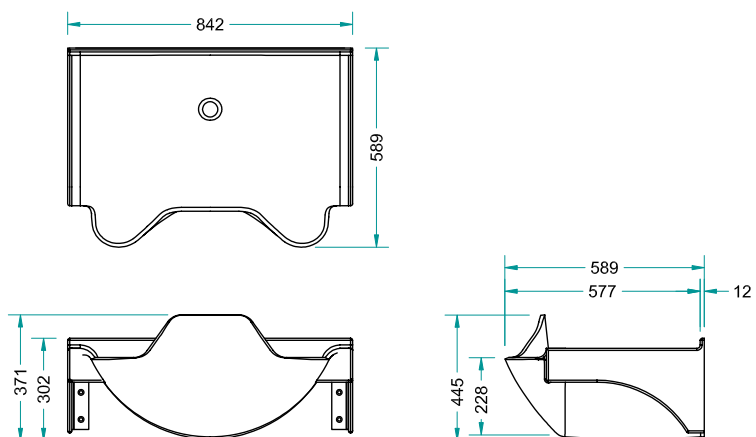

Corian® composite is a high-quality material made of natural minerals and acrylic polymer. It is a functional and practical material with unlimited design possibilities. Corian® material has high chemical resistance, is non-porous, easy to clean and can be used in spaces with strict hygiene requirements. Our sinks are made of monolithic material throughout its thickness, and the material cannot delaminate or absorb liquids. Due to its antibacterial properties and easy care, Corian® is particularly suitable for use in places with strict hygiene requirements, such as hospitals, operating rooms, laboratories and other healthcare facilities.

Note: Medical basin mixers, basin siphons and soap dispensers shown in the images are for illustration purposes only and can be purchased separately.

DB MEDICAL SIMPLE A

The sink is specially adapted for the needs of medical institutions, operating rooms, and surgeons. It is recommended to equip the sink with a non-contact water mixer that has a precise temperature regulator. This reduces the risk of scalding, provides convenient hand washing, and allows the water temperature to be adjusted as needed, improving efficiency and reducing the surgeon's focus on minor details. An integrated solution combines modern technology and ergonomics, ensuring a safe and efficient working environment.

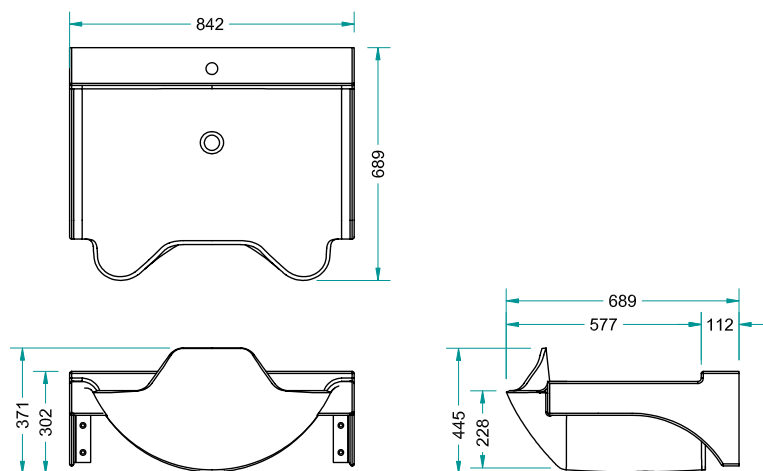

- A raised front part of the sink provides protection against water splashing onto clothing.
- The adequate depth of the sink provides protection against water splashes and drops, while not creating the risk of accidentally touching the bottom of the sink with already clean hands.
- The sink has no flat surfaces, which serves as an additional precaution to prevent any objects from being placed in the sink that are not related to hand washing and sanitizing, thus keeping the surface as clean as possible.
- Rounded internal corners serve for convenient and efficient cleaning of the sink.
- Installed and fastened to the wall, thus not taking up additional space on the floor and not interfering with floor cleaning.
- The location of the water mixer is intended to be built into the wall.
- Easily wall-mounted; all necessary mounting hardware is included in the package.
- The white color ensures easy spotting of dirt for effective cleaning. If the sink looks clean, it is clean.

WDO Medical Triple

ABRA MEDICAL SINGLE

A classically designed sink, specifically designed for medical workers and is one of the deepest in the range of sinks we offer. It is designed to fit comfortably in tight spaces without sacrificing ergonomic and efficient use.

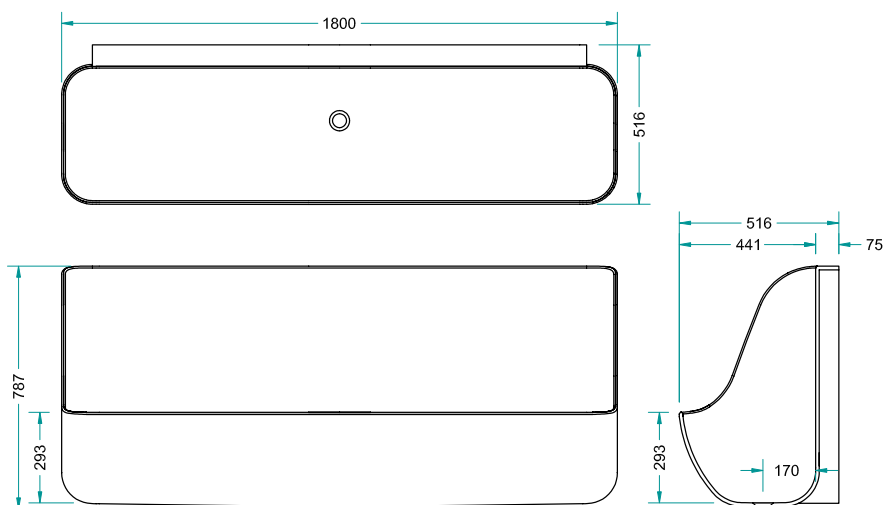

- A design that maximizes room utilization – the narrowest sink in our collection.
- The deepest sink in our collection provides increased protection against water splashes on clothing.
- Protective panels on the back and sides of the sink allow convenient and efficient cleaning of the sink and provide protection against water splashing on the walls.
- The rear panel has space allocated for the installation of water mixers and disinfection systems, which do not need to be pre-installed in the wall. If necessary, plumbing maintenance and replacement can be performed relatively easily.
- The increased depth of the sink provides protection against water splashes and drops, while avoiding the risk of accidentally touching the bottom of the sink with already clean hands
- The sink has no flat surfaces, which serves as an additional precaution to prevent any objects from being placed on the sink that are not related to hand washing and sanitizing, thus keeping the surface as clean as possible.

ABRA Medical Triple

FLOW MEDICAL SINGLE

This classic sink is the most economical option in our range. Although it is not very deep, its flowing line design makes it easy to maintain. This solution is ideal for medical facilities where lower costs are required without compromising functionality and convenience.

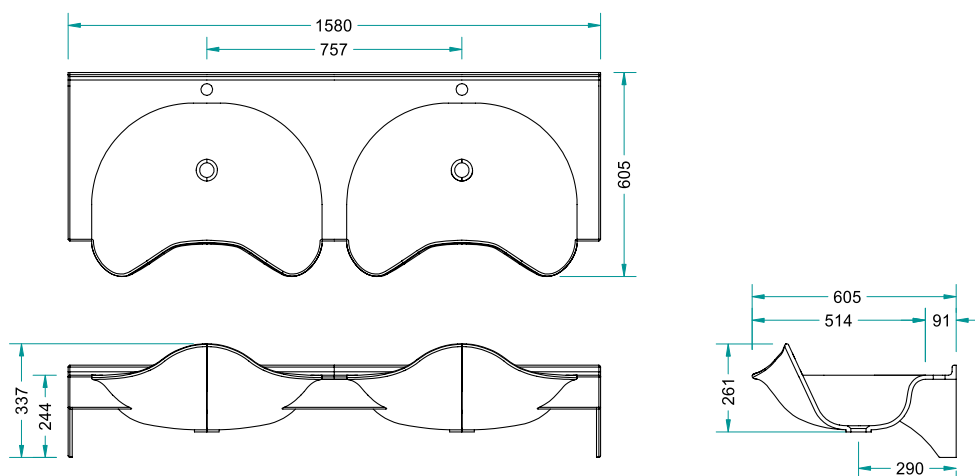

- Optimal sink depth. The sink is shallower but remains functional and more economical in its segment, meeting all necessary requirements for the medical industry.
- The shape of the sink is designed with flowing lines that ease daily use and maintenance.
- Installed and fastened to the wall, thus not taking up additional space on the floor and not interfering with floor cleaning.
- Easily wall-mounted; all necessary mounting hardware is included in the package.
- The white color ensures easy spotting of dirt for effective cleaning. If the sink looks clean, it is clean.
